PROJECTS

Wikipedia - API

- **Wiki - API** (Application Programming interface) is an python app to fetch information from Wikipedia for a specific query.
- We can use this API in any application to show up the query. For example we can use the API in an book sale application to show up the author details of book.
- This API deliver the result in **JSON** format.
- This is an python app build with flask framework & it requires **Wikipedia PIP package**.
